Table of Contents

Hold your mouse over the following hyperlinks and press Ctrl+Left Mouse Button to go to the bookmarks.

[Features](#) - See some of the amazing features in Tomahawk Gold.

[Bookmarks](#) - New Bookmarks work just like html 'anchors' allowing you to jump to a specific location.

[Charts](#) - Design and Insert Charts directly inside your document.

[Paragraphs and Borders](#) - Advanced attributes make them stand out.

[Quick Format Painter](#) - One click formatting saves you loads of time.

[Mail Merge](#) - Automate your mailings.

[Order Information](#) - Information on where to purchase Tomahawk Gold.

New in version 3.6.3

1. Improved N-Up formatting. Now takes into account the original orientation of document.
2. Option to print page border dividers in 2-Up and 4-Up printing.
3. Option to keep proportionate page height and width in 2 up printing (Stretched unchecked by default).
4. Added option to convert N-Up preview document to pdf.
5. New Header/Footer variables, 'i' (current page) and 'T' (Total Pages): will display page numbers as Roman Numerals. ie: 'Page &i of &T' would display 'Page VI of XII' if the current page is 6 and total pages is 12.
6. New 'Quick Format Painter' feature - works similar to MS Word.
7. Text for *PDF Subject* now saved with document.
8. Bookmarks feature added.
9. Automatically insert a hyperlinked 'Table of Contents' created from your existing Bookmark Anchors.
10. New CTD (Compressed Tomahawk Document) file format
High compression rate with optional encryption using 128 bit Rijndael (AES) encryption cipher
11. It is now possible to save and load documents in XML format.
12. New form fields -
Text Fields:

13.
ComboBoxes:

14.
and CheckBoxes: for form entry that export to Tmd, Pdf and Html.

This is a sample textbox that can contain multiple lines which wrap to the control's edges.
15. and a TextBox

16. OLE controls - embed documents, spreadsheets, music files, etc. directly in Tomahawk documents.
17. Customizable menu - set the items you want to stay visible.
18. Turn On and Off toolbar visibility.
19. Ability to change the look and feel of the main window.
20. Ability to load and save the current toolbar layout.
21. *Directly opens most pdf files for editing while retaining most of the original formatting and layout! This feature is still experimental.*
 - a) You can still use the original menu option under "Tools" to extract text and images from existing pdf files and import them directly into Tomahawk Gold.
22. Added 'Convert to PDF' button on main tool bar.
23. Improved the "stretched mode" rendering to more correctly simulate WYSIWYG in the editor.
24. Added 4 new background options: Top Left, Top Right, Bottom Left and Bottom Right.
25. Complete redesign of menu system and appearance.
26. Added ability to change the top and bottom indents (inside page margins) on the editor page
27. Left and Right Indents can still be set with the ruler.

EXAMPLE PDF

This is an example of an Adobe™ PDF® that can be created by Tomahawk Gold. Please note that the PDF files you create will be much larger if you use a lot of images in your document. Tomahawk Gold uses compression techniques on images to reduce the PDF file size as much as possible. Using background images for your pages will significantly increase the size of your final pdf file.

FEATURES

Tables

Cells can be split	Vertical alignment can be set	Text can be justified inside of tables too!	Right		
Border styles can be set for entire table and for individual cells. This cell has borders set to none.		This cell has its own border color.			
<p>This cell has it's own background image. To set a background image for a single cell, Right click inside the cell, select 'Table Properties' from the popup-menu, click on the 'Cells' tab, click on the 'Picture' button.</p>					
<p>Tables can be added inside of other tables! The one below has a larger table border in different colors. The table has 1 row and 2 columns, cell padding has been set to 5 pixels and cell spacing has been set to 2 pixels. This will separate your "columns" so the text in each cell is not on top of the next cell. The cell on the right has been set to have the left border showing.</p>		<p>Each cell can have a different background color. The text in this cell has been set with a vertical alignment of middle.</p> <p>Tomahawk Gold supports internal Bookmarks to a specific page for pdf files, ie: page#7 In PDF - Go to Page7</p> <p>For Tomahawk, Html and PDF files the hyperlink should point to an existing bookmark preceeded by a # sign, ie: #TomahawkInformation In Html & PDF - Go to Order Page</p>			
<table border="1"> <tr> <td>The cells inside of this table have their borders set to none. Text entered in the cells will automatically expand as you type. No need to hit the enter key .</td> <td>This will give the illusion of placing text into separate columns. To add a 'newspaper' look to it, you can set one cell to have a left 'seperator' border only.</td> </tr> </table>		The cells inside of this table have their borders set to none. Text entered in the cells will automatically expand as you type. No need to hit the enter key .	This will give the illusion of placing text into separate columns. To add a 'newspaper' look to it, you can set one cell to have a left 'seperator' border only.		
The cells inside of this table have their borders set to none. Text entered in the cells will automatically expand as you type. No need to hit the enter key .	This will give the illusion of placing text into separate columns. To add a 'newspaper' look to it, you can set one cell to have a left 'seperator' border only.				
Cells can be merged					

Text can have its own **background color** independently of the paragraph background color.

Different text styles:

~~Strikeout~~ Overline Underline **Bold** *Italic* Super^{Script} Sub_{Script}

Bullets:

- Line 1
- Line 2
- Line 3
- Line 4

Bullet Indent Level Styles Can Be Set:

- ▶ Line 1
 - ▶ Line 2
 - ▶ Line 3

Custom Bullets can be specified from existing images:

-  Line 1
-  Line 2
-  Line 3

Numbering styles can be set:

1. Line 1
2. Line 2
3. Line 3
4. Line 4

Numbering styles can be set with different levels:

- 1) Line 1
 - a) Line 2
 - b) Line 3
- i) Line 4

Numbering styles can be set with different style levels:

1. *Line 1*
 - 1.1. *Line 2*
 - 1.2. *Line 3*
 - 1.2.1. *Line 4*

Full text search enabled in the PDF file.

Insert special characters ® © ⊆ ∆ and any other symbol you have on your computer.

Paragraphs and Borders

Paragraphs and sections can have their right and left margins (indents) set independently of the rest of the document. You can use this feature to add emphasis to the content of that section.

Paragraphs can also have the first line set to have an indent or be *hanging*. This will also help attract attention to that section. Paragraphs can also have a border set around them on all four sides or on selected sides as you see fit. This paragraph has a double border along the top edge only, with a text margin of 4 between the line and the text.

This paragraph has a single border around it with a text margin of 12. You can use paragraph borders instead of tables to frame the text.

This paragraph has a wider single border around it with a text margin of 12. The paragraph has a light green background and the padding of the color for the background is set to 10.

You can also change the color of the border around a paragraph to any color you like. This border is set to a text margin of 1.

Using our new **Quick Format Painter** saves you time and duplicated effort. Say you've written a report in Tomahawk. You like the look, especially your headings, which are 16 pt. Bookman Old Style, horizontal scaling of 150%, expanded character spacing of 4 pt, dark blue, bold, with a text background shading of light gray. Fifteen minutes before you're supposed to present the report, your manager asks you to add four new sections to the report. You spend thirteen minutes adding the information, and the next two wishing that you hadn't chosen such complicated formatting for your headings, since you now have to apply it to all the new ones.

Using the Quick Format Painter (Ctrl+Q) saves you that time and duplicated effort. Instead of having to manually apply the font, font effects, horizontal spacing, and other formatting to each new section heading, you can quickly copy all of the formatting attributes by using one toolbar button.

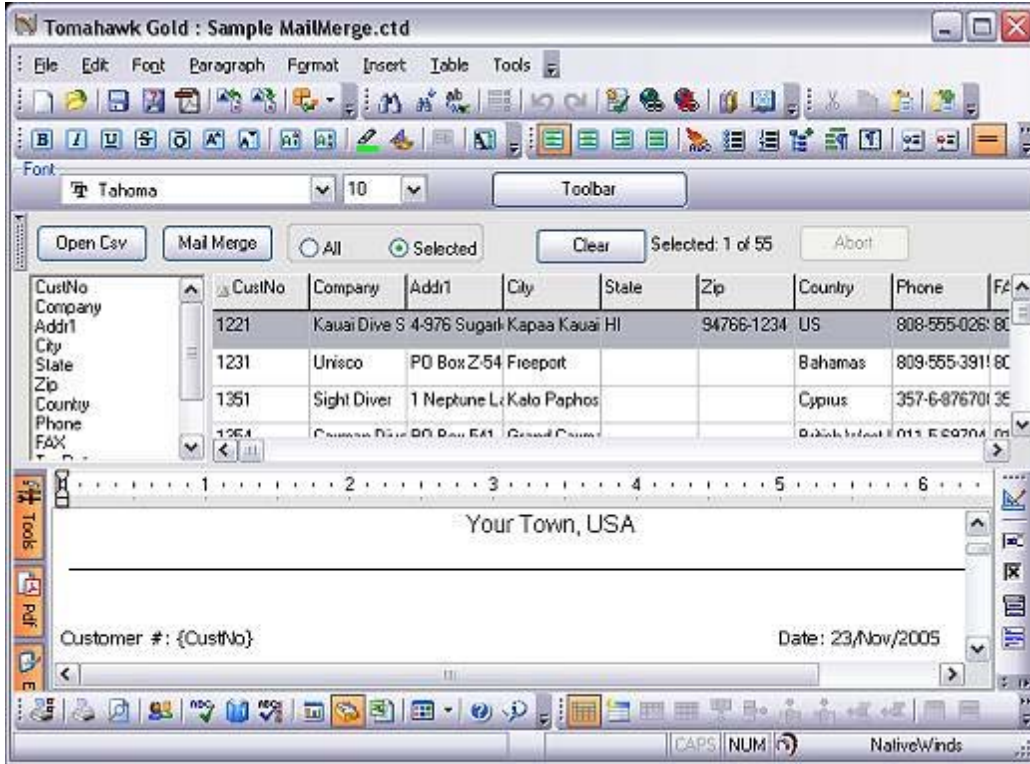

To copy formatting, do the following.

1. To copy attributes (such as spacing, font, size, background color and font effects), place your mouse anywhere inside the text (or select the text) whose formatting you want to copy.
2. On the Font toolbar, click Quick Format Painter button.  (Ctrl+Q)
3. The Quick Format Painter button will change  to indicate it is ready to apply formatting.
4. Select the text you want to apply the formatting to:
 1. To apply the formatting to just one other section, click the Quick Format Painter button again (or press Ctrl+Q) to apply the formatting to the selected text. The Format Painter button will change back  to indicate it is ready to select another format.
 2. To apply the formatting to multiple sections, press Ctrl+Q twice. This will apply the formatting to the text you have selected and allow you to move to another section with the same format ready to be applied again.
5. Repeat the process as often as needed.

NEW Mail Merge Feature:

You can now open a database (csv files) and print mail merged documents.

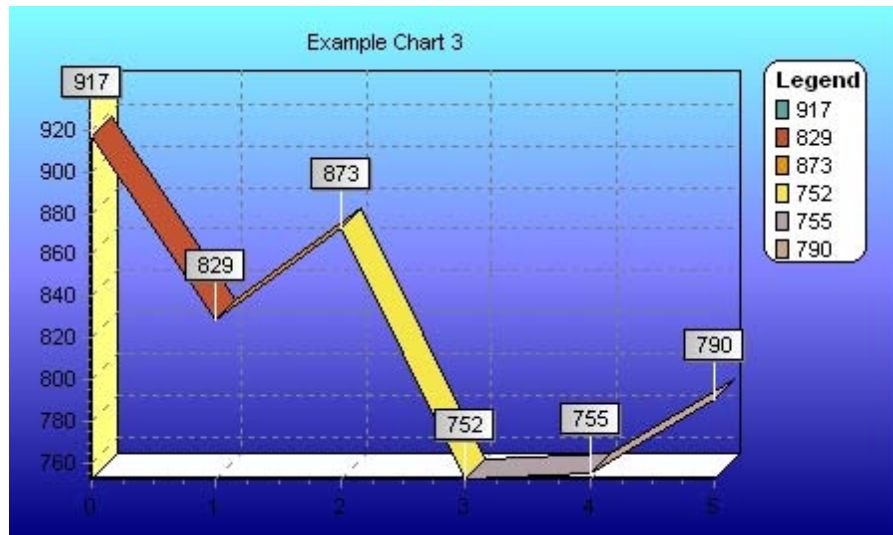

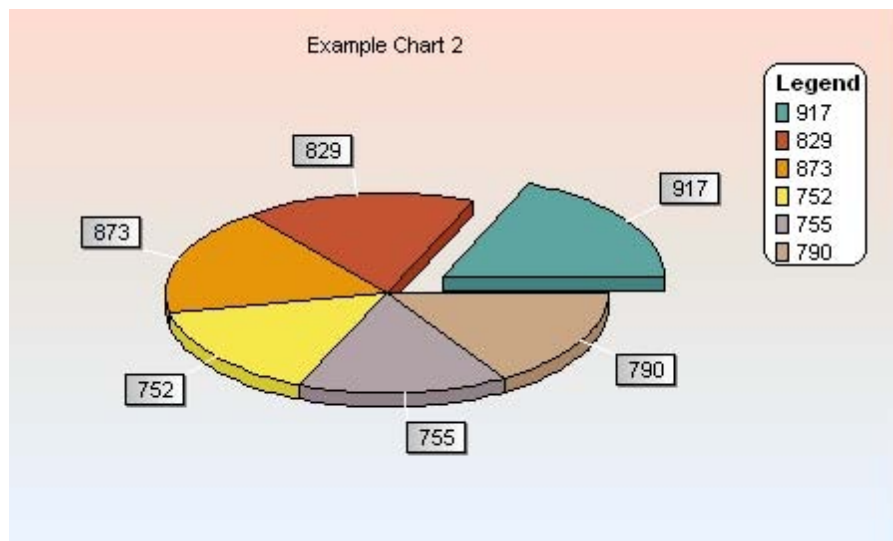

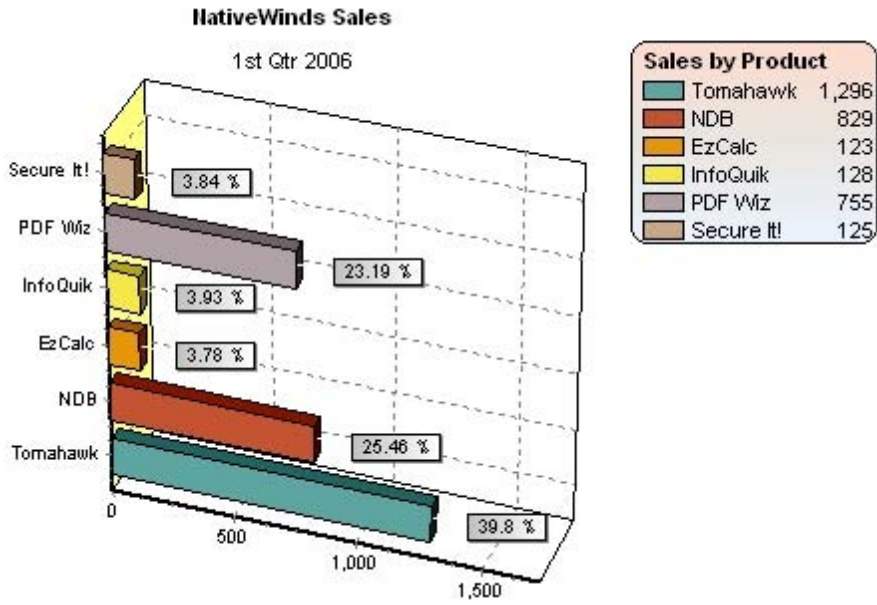

1. Click the 'Mail Merge' button. 
2. Click the indicator on the top-left of the ruler where it says 'Mail Merge'.
3. Select your csv database.
4. Insert fields into your document by double-clicking the field names listed in the selection box.
5. When you've finished inserting your fields, select the records in the grid you want to merge.
6. Press the 'Merge' button.
7. Your done!

*** Press the 'Clear' button to remove the imported database when your finished. (This releases the memory required by the program.)

Example Tomahawk Document

Insert Charts with the Chart Designer (inserts as images Only)

Example Tomahawk Document

No special software, ghostscript or print drivers needed.

In fact, the only Adobe product you need to have installed is Adobe Acrobat Reader. And that's only if you want to view the file that Tomahawk creates for you! Tomahawk can still create the PDF file even if Acrobat Reader is NOT installed.

Tomahawk operates on any Windows platform from Win95 on up to Win2003!

Ability to:

- Hide the menu bar in Acrobat Reader.

- Hide the tool bar in Acrobat Reader.

- Prevent printing.

- Prevent copying.

- Prevent changing the structure.

- Set the margins.

- Set the Title field.

- Set the Author field.

- Set the Subject field.

- Set the Keywords.

- Password protect your PDF file with an owner password or a user password and an owner password.

- MORE...
